Gillian Cochran

Development Progress Report 1

      I've started my coding out by borrowing code from my Unit 3 Project. The code that I've borrowed is code from the harmonizer section of my project. I will be editing this code so each harmony from the harmonizer is a separate voice from one another so they are able to be activated separately from one another.

      My next steps will be editing the harmonizer code, developing the delay effect and its parameters, then routing them all to one homogenous and adjustable 'signal out' knob/slider. I'm a bit behind in development, but I believe I've found a unique way to present these live processing effects.
